BA 9053

MK 9053

- According to IEC 255, VDE 0435 part 303
- One model for AC and DC current
- Measuring ranges from 2 mA to 25 A
- BA 9053 optionally with 3 current ranges 0,1 to 10 A
- BA 9053 optionally with safe separation to VDE 0106 part 101
- BA 9053 optionally with galvanic separated DC auxiliary supply
- MK 9053 optionally with remote potentiometer
- Open circuit operation
- Optionally closed circuit operation
- High overload possible
- Permissible frequency range of the measuring current up to 400 Hz
- Optionally with time delay
- LED indicators for operation and contact position
- Width MK 9053: 22,5 mm
- Width BA 9053: 45 mm

Applications

Monitoring current in AC or DC systems

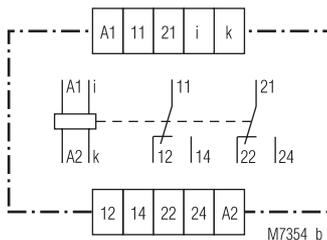

Function

The relays measure the arithmetic mean value of the rectified measuring current. The AC units are adjusted to the r.m.s value. They have settings for response value and hysteresis. The units work as overcurrent relays but can also be used for undercurrent detection. The hysteresis is dependent on the response value. The BA 9053 is optionally available with time delay. On the MK 9053 a fixed time delay can be activated by linking terminals X3-X4.

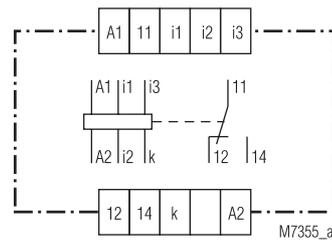

Indicators

upper LED: on, when auxiliary supply connected
lower LED: on, when output relay activated

Extending of measuring range:

For DC-current higher then the highest measuring range the voltage relay BA 9054 or MK 9054 measuring range 15 ... 150 mV can be used together with secondary winding of 1 A or 5 A is used together with BA 9053 or MK 9053. The nominal load of the CT should be $\geq 2,5$ VA.

Measuring principle:

Adjustment:

arithmetic mean value
DC units are adjusted to the DC-current mean value, AC units to the r.m.s value. It ist possible to use AC units to measure DC and the other way round. The scaling is the shifted by the factor:

$$(I_{r.m.s} = 1,1 \bar{I} : \bar{I} = 0,9 I_{r.m.s})$$

Temperature influence:

< 0,05 % / K

Setting ranges

Setting:

Response value: infinite variable 0,1 I_N ... 1 I_N
relative scale
Hysteresis: infinite variable 0,5 ... 0,98 of setting value
 $\leq \pm 5$ %

Accuracy:

Time delay t_v

BA 9053: infinite variable from 0,5 - 5 sec only with BA 9053/010, BA 9053/011, BA 9053/012, BA 9053/013

MK 9053:

approx. 1 s or 5 s, fixed
The units are delivered with a bridge between terminals X3 - X4. If this bridge is removed the time delay is inactive.

Setting

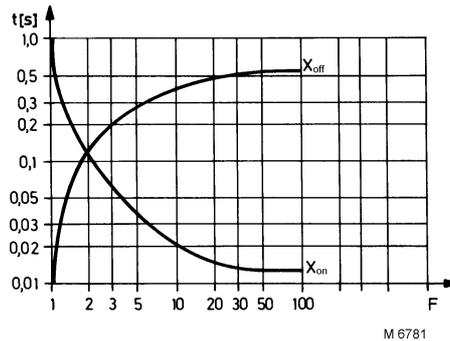

Example:
Current relay BA 9053 / MK 9053 AC 0,1 ... 1 A

AC according to type plate:
i.e. the unit is adjusted to AC voltage
0,1 ... 1 A = measuring range

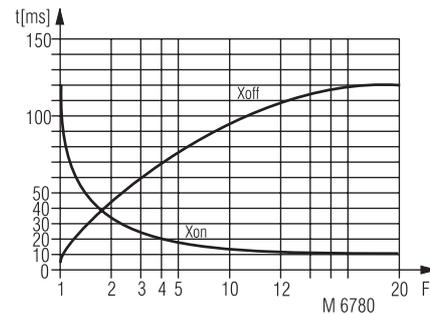

setting on upper potentiometer: 0,6
setting on lower potentiometer: 0,5

response value = 0,6 x 1 A = 0,6 A
release value = 0,5 x 0,6 A = 0,3 A

Switching delay

The characteristic shows the switching delay depending on the values of X_{on} - X_{off} when switching the current on or off. A slow current change reduces the delay.

$$F = \frac{I_{\text{applied}}}{I_{\text{setting}}}$$
